PROFILE

A highly motivated Computer Science student with a passion for innovation, I possess a knack for tackling complex challenges and have developed intermediate-level proficiency in a diverse range of programming languages, including Java, Python, and C#. My skills extend to a solid understanding of Web development principles and technologies, allowing me to contribute meaningfully to projects. I am a quick and enthusiastic learner, eager to further refine my technical skills and analytical abilities to develop impactful solutions within a dynamic team environment.

EDUCATION

Bachelor of Technology in Computer Science

Harare Institute of Technology

2023 – Current

Harare, Zimbabwe

SKILLS

Object Oriented Programming (Java, Python, C#)

Web Development (React, Angular, Node.js, Django)

Database Management

Version Control (Git)

Networking

PROJECTS

HATS (HIT Asset Tracking System)

Developed a system capable of tracking the assets which belong to HIT using the laravel framework. The system was able to tag assets using QR codes, facilitate the transfer of ownership of assets between staff members and schedule maintenance plan for assets.

Anti-Money Laundering System

A system to help financial institutions to easily pick-up, prevent and control money laundering activities. It monitors financial transactions in real time, identify suspicious activities and alert the enforcement in real time to potential fraudulent activities.

Portfolio Website

A personal portfolio website built with Next.js and Tailwind CSS to showcase my projects and skills. Features animations, responsive design and a contact form.
